01/13/13 13:00 CST 0 Source: Law Enforcement

Several roads were flooded across the county.

A strong cold front moving across the region caused some flash flooding as storms developed along the front. Limited instability kept the storms from becoming too intense.

(AR-Z074) ASHLEY, (AR-Z075) CHICOT

A strong cold front brought a shallow and very chilly air mass southward into the ArkLaMiss the night of January 13th. The cold air undercut relatively mild air aloft, thus setting the stage for freezing rain over northwest portions of the ArkLaMiss on January 14th. A couple periods of moderate freezing rain accompanied by thunder (which is rare) occurred with temperatures hovering near or just below 32 degrees.

01/14/13 18:00 CST

A strong cold front brought a shallow and very chilly air mass southward into the ArkLaMiss the night of January 13th. The cold air undercut relatively mild air aloft, thus setting the stage for freezing rain over northwest portions of the ArkLaMiss on January 14th. A couple periods of moderate freezing rain accompanied by thunder (which is rare) occurred with temperatures hovering near or just below 32 degrees.

Very cold air aloft associated with an upper low crossing the Deep South made the atmosphere favorable for snow during the early morning hours of Thursday, January 17th. Strong lift caused widespread light to moderate rain to develop during the evening of the 16th as surface temperatures held just above freezing. Late that night, the rain transitioned briefly to sleet before switching to all snow from west to east. In far eastern portions of Mississippi, rain did not switch to snow until after daybreak. One to three inches of snowfall across a good portion of the ArkLaMiss was common, with a few swaths of three to four inches occurring in a couple areas. The highest snowfall amounts were seen in eastern Choctaw County where six inches of snowfall accumulated.

Flooding caused many roads to become impassable around the city.

A strong weather system approaching the ArkLaMiss initiated a prolonged period of severe weather that lasted from early evening on the 29th into the early morning hours of the 30th. Two tornadoes crossed Bolivar County, with multiple instances of thunderstorm wind damage occurring. One storm that crossed eastern Washington County into Sunflower County caused substantial straight line wind damage. A few instances of flash flooding occurred with these storms as well.
